

Improved Formula thanks to Solvent Exchange

The versatile ink system Tampa® Plus TPL has proven itself for years in industrial and graphic pad printing, but also in sensitive areas such as the decoration of toys.

As part of product maintenance, TPL is now being modified to a modern solvent combination.

Tampa® Plus TPL features lowest PAH values, is formulated without the use of any aromatic solvents and suitable for applications according to the directive 2009/48/EG („Toys directive DIN EN 71/3“).

By replacing solvents, we can ensure that critical impurities from the solvent manufacturing process are avoided, making the multifaceted Tampa® Plus TPL even safer.

The old and new formulations can be mixed and overprinted as desired. The strengths of this ink system – the processing as well as the gloss level, ink flow, and resistance of the dried ink film – remain the same.

Date of changeover

This change becomes effective starting with **batch 214** (immediately).

You will find an additional remark on the label stating:

“Attention: Improved Formula”
